

International Conference on Communication and modern Information for development

Introduction

The recent development of technology and means of communication in all its forms and domains requires us to address their role in enhancing and coordinating development programs to serve the human being. To achieve this, scholarly efforts have been sought to indentify and benefit from the various services offered by modern technology, through developing a sound scientific method to follow up such technologies, adjust it with sustainable development programs, and benefit from its advantages. This will, therefore, contribute to the offering and enhancement of the best programs that have been proven successful and useful to human and institutional development.

Objectives:

1. To build up advanced skills which serve the human being wherever he exists, through maximizing the benefit from modern technologies in operating development programs.
2. To operate development programs through modern technologies through developing sound rules for this project.
3. To coordinate capacities and scientific studies to achieve professional integration of modern digital technology with development programs.
4. To determine the foundations and rules in light of which technologies that serve development programs are distinguished from those which are useless, in order to provide researchers with greater opportunities in their areas of research.
5. To publish scientific studies to learn from human societies and spread development through digital technologies.

Conference themes:

1. Development and impact of modern digital technologies in enhancing its prospects and challenges.
2. Evolution of the use of digital technologies techniques for achieving development.
3. Performance of e-government portals and its impact on development.
4. The development of digital technologies and its impact on the ways of thought of service institutions.
5. Social transformation and the role of modern techniques in directing them to the best methods.
6. Means of developing social visions and mass media through the programs of modern digital technologies.
7. Applications of modern digital technologies and their impact on enhancing community participation.
8. Work ethics from the perspective of development sciences and the impact of modern technologies in promoting them.
9. The concept of innovation and creativity in development and the role of modern technologies in establishing it as a method in scientific and educational institutions.
10. Introducing the efforts of educational institutions in using digital technologies for development.
11. Mechanisms for regulating the use of modern digital technologies in modernizing development programs.
12. Taking advantage of the methods of addressing the gaps in technology use to serve development programs.
13. Advanced technical options in enhancing development programs.
